Subject: Positive Impact on Marcellus Shale

June 26, 2012

Dear Mr. Wilkin,

I left a message on your phone just now. I'm Gemma Lockhart. I attended Dartmouth College and studied International Political Economy of Resources at the Colorado School of Mines. We received a call for abstracts to JESS, the Journal of Environmental Studies & Sciences for their Special Edition on the Marcellous Shale Development to be published in the Summer of 2013. I did a little ferreting around about the issue, I'm learning as I go, and made a decision I would like to submit an abstract. As I look at the whole of the issue at hand, I find the most important detail or development to impact the Marcellous Shale Development to be the draft report you, DeGuilio, Miller & Oberley authored and published through the EPA on December 8, 2011.

I would like to write an abstract that may or may not give way to an invitation to submit a full paper to JESS that would be titled something like:

Relationship to Nature, the EPA Ground Water Investigation at Pavillion, Wyoming and Positive Impacts on Ground Water Protection within Marcellus Shale: DiGuilio, Wilkin, Miller & Oberley.

To do this I am looking for your blessing and an opportunity to have a brief conversation before I must submit the abstract on July 1.

Or perhaps you could respond to this e mail and give your thoughts and directions on the matter, so I might move forward in a good way.

Thank You.

Sincerely,

Gemma Lockhart
